PROFESSIONAL SUMMARY

SOC focused cybersecurity professional with a six month internship at VINCI Energies, a global industrial group, working as one of three security staff in a 15+ member APAC IT team. Audited 200+ custom detection rules in the production SIEM (ELK Stack), corrected MITRE ATT&CK technique mappings across the rule set, and delivered detection coverage reporting to leadership with Python automation. Evaluated three Breach and Attack Simulation tools hands on and presented the findings to the APAC team and HQ cybersecurity staff in France; the recommendation (OpenAEV) was adopted into company systems. Security discipline first built managing classified military documents in the Republic of Korea Army, where passing a corps level security audit became the starting point of a cybersecurity career. QUT Bachelor of Information Technology (Computer Science major, Networks and Security minor), graduated with Distinction, 2026. Full time work rights in Australia through at least August 2028 (Temporary Graduate Visa, subclass 485).

TECHNICAL SKILLS

Security Operations: SIEM (Wazuh, ELK Stack, Kibana), IDS/IPS (Snort), MITRE ATT&CK, detection rule tuning, threat detection, incident detection, log analysis, SOC reporting

Adversary Emulation: BAS tooling (OpenAEV, MITRE Caldera, Atomic Red Team), vulnerability assessment (Nmap, OpenVAS, NVD/CVSS), Metasploit, Burp Suite, Wireshark, mitmproxy

Identity & AppSec: Keycloak, OIDC/OAuth 2.0, SSO, RBAC, session management, SQL injection prevention, defence in depth

Programming & Automation: Python (advanced), Bash, SQL, JavaScript, Django

Infrastructure: Linux (Ubuntu, Kali), Windows Server, Docker / Docker Compose, Nginx, iptables, TCP/IP, VLANs, network segmentation, Azure & AWS fundamentals, Git

Professional: Technical presentations to regional and global stakeholders, detection coverage and SOC reporting, security risk management (risk registers), Agile Scrum delivery, technical documentation and project handover, cross cultural collaboration in English

PROFESSIONAL EXPERIENCE

Cybersecurity Intern, Defensive Operations, VINCI Energies (VESI)

Jan 2026 to Jul 2026

Wacol, QLD. APAC cybersecurity team of a French multinational; one of three security staff in a 15+ member regional IT team

- Delivered two SOC projects end to end: an audit of 200+ production SIEM detection rules with MITRE ATT&CK remapping and a BAS tool evaluation whose recommendation (OpenAEV) was adopted into company systems (details under Key Projects)
- Presented the MITRE ATT&CK framework and BAS evaluation findings to the APAC team in person and to HQ cybersecurity staff in France via Teams, communicating technical analysis to regional and global stakeholders
- Developed Python scripts to maintain and automate SOC rule operations, built Kibana dashboards giving leadership visibility of detection rule coverage, and contributed to APAC cybersecurity awareness initiatives
- Operated within a multinational enterprise IT environment alongside SAP, ERP, and field service teams, collaborating daily in English and joining regular Teams meetings with the HQ cybersecurity team in France

IT Support Staff, Ignite PC Cafe

Jan 2025 to Mar 2026

Macgregor, QLD

- Provided technical support for 40+ gaming PCs, including server management, network troubleshooting, hardware diagnostics, and resolution of boot and user access issues, maintaining uptime through rapid incident response

Hall Staff, Mokkoji Korean BBQ

Aug 2023 to Jan 2025

Mount Gravatt, QLD

- Provided customer service in a fast paced environment, collaborating with a diverse team and building the reliability and communication skills recognised by supervisors

Classified Document Management Specialist, Republic of Korea Army

Sep 2019 to Apr 2021

Pocheon, South Korea. Brigade level operations

- Managed the full lifecycle of classified military documents (security levels 2 to 3): creation, distribution, tracking, and secure disposal; coordinated CEOI distribution and radio communication network management
- Successfully passed a corps level security audit through meticulous record keeping and strict compliance with security protocols, the origin of my cybersecurity career

KEY PROJECTS

SIEM Detection Rule Audit & MITRE ATT&CK Mapping, VINCI Energies

2026

Internship project on the production SIEM (ELK Stack) of a global industrial group

- Audited 200+ custom detection rules running in the production SIEM, assessing each rule's correctness and relevance and identifying rules requiring modification or tuning
- Verified and reclassified MITRE ATT&CK technique mappings across the 200+ rule set, producing accurate detection coverage reports for management and supporting maintenance with Python tooling

BAS Tool Evaluation & Adoption, VINCI Energies

2026

Internship project recommending a Breach and Attack Simulation capability for detection validation

- Comparatively analysed the BAS tool landscape against company requirements and shortlisted three candidates: Atomic Red Team, MITRE Caldera, and OpenAEV; deployed and tested all three hands on
- Presented the evaluation and recommendation to the APAC team and HQ cybersecurity team in France; OpenAEV was adopted into the company's systems on the strength of the evaluation

Security Programmer, PrismDB Capstone Project (industry client: OreFox)

2025 to 2026

QUT IFB398/399. Agile Scrum team of 6 building a geological data platform; owned authentication, access control, and security risk management

- Designed and implemented Keycloak/OIDC single sign on and role based access control for a Django platform: Authorization Code flow, custom OIDC backend mapping IdP claims to users, claims middleware, and a read only Guest role enforced server side with defence in depth
- Mitigated SQL injection in dynamic schema operations via strict identifier whitelisting and full query parameterisation; owned the security rows of the team risk register across identify, analyse, and respond cycles
- Automated the identity environment as code (Keycloak realm import, persistent volumes, dual issuer OIDC configuration), turning SSO into a one command Docker deployment and reducing the risk of the team's Azure migration
- Delivered the project handover package (67 file PR with 1,591 lines added and 647 removed), accepted by the client's lead developer without rework

Network Security Control Deployment & SIEM Integration, CAB441

2025 • Graded 40/40

Hands on coursework that directly led to the VINCI internship. Full portfolio at github.com/inkwanglee/Network-Security-Portfolio

- Conducted vulnerability scanning and prioritisation with Nmap and the NVD against a Metasploitable 2 environment (23 CVEs analysed, incl. CVE-2011-2523, CVSS 9.8) with automated Python reporting
- Deployed Snort IDS with 4 custom rules (ICMP reconnaissance, SSH brute force, port scanning, DDoS) achieving 100% detection in testing, with logging in multiple formats for SIEM integration
- Implemented Wazuh SIEM for centralised log management and real time threat correlation, mapping events to MITRE ATT&CK (87 techniques monitored, 354 alerts per 24 hours) and designing complementary controls (fail2ban, network segmentation, EDR)
- Configured an Nginx reverse proxy with TLS/HTTPS for a WikiJS application and a mitmproxy forward proxy with certificate based HTTPS inspection and content filtering

EDUCATION

Bachelor of Information Technology with Distinction, Queensland University of Technology

Nov 2023 to Jul 2026

Computer Science major, Networks and Security minor. Graduated Jul 2026. Brisbane, QLD

- Key coursework: Network Security (CAB441, major assignment 40/40), Cloud Computing (CAB432), Networks, Network and Systems Administration, Capstone Project (industry client)

ADDITIONAL INFORMATION

Work Rights: Full time work rights through at least August 2028 via Temporary Graduate Visa (subclass 485); pursuing permanent residency through employer sponsorship or skilled regional pathways

Languages: Korean (native), English (professional working proficiency)

Location: Based in Brisbane; willing to relocate anywhere in Australia, including regional areas
